### DETAILED ACTION

Claims 1-16 are pending.

#### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to a method of administering to an individual a nucleic acid encoding a precursor GLP-1, wherein the GLP-1 is cleaved *in vivo* which results in generation of activated in GLP-1 in the individual, classifiable in class 424, subclass 93.2.
- II. Claims 1-16, drawn to a method of administering to an individual a nucleic acid encoding a precursor GLP-1, wherein the GLP-1 is cleaved *ex vivo* which results in generation of activated in GLP-1 in the individual, classifiable in class 424, subclass 93.21.

NOTE: Claims 1-8 are placed into both groups because claims 1-8 embrace two distinct methods of delivering a nucleic acid to an individual (ex vivo and in vivo).

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). The instant specification does not disclose that these methods would be used together. The methods are unrelated as they comprise distinct steps and utilize different products, which demonstrates that each method has a different mode of operation. Each invention performs its function using a structurally and

Art Unit: 1635

functionally divergent material. Furthermore, searching the inventions of Groups I and II together would impose a serious search burden. In the instant case, the search of the in vivo method of delivering a nucleic acid to an individual in Group I and the ex vivo method of delivering a nucleic acid to an individual in Group II is not coextensive. The inventions of Group I and Group II have a separate search status as shown by their different classifications.

Because these inventions are distinct for the reasons given above and the search required for each Group listed above is not required for any other Group listed above and the search for each group is not co-extensive, restriction for examination purposes as indicated is proper.

It would be unduly burdensome for the examiner to search and consider patentability of all of the presently pending claims, a restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 § 1.17(h).
